

The Early Childhood Learning Experience

Specialized Care and Attention

Early childhood learning does not have to wait to begin until your child reaches preschool, pre-kindergarten, or school age. Your infant will need guidance and care into a new world of activities to help improve their self-awareness and motor skills coordination early on. As your child grows in his or her toddler years, we will continue to engage them in activities to assist in their development and understanding of colors, sorting, matching, and responsibility.

At Angels Academy, infants are cared for in a nurturing, safe, creative, and classroom learning environment. Your child's first twelve months of life are filled with early childhood cognitive, emotional, and physical development activities to ensure that their daily needs are met with undivided attention to detail. You can be confident that your child will receive the same kind of care and stimulation that you, as a loving parent, would provide for your child.

Our dedicated and trained classroom teachers and care givers incorporate singing, motor skills, and sensory exploration into daily activities to inspire and support your child's development into a smart, attentive, and explorative toddler.

Early childhood development is important to every parent. Infant milestones are tracked and recorded related to a child's age, physical ability, language development, social development, and early learning development.

Infants develop and reach milestones at different rates and times. How a child develops and achieves is unique to each child and we monitor each step of their early childhood growth and development. We are here to establish a solid foundation for children during their early childhood development.
